

Exam Report

Module Code/Title: PHYS2015 Energies in the Environment

Module Leader: Andrea Dieball

Feedback comments:

The exam was done extremely well. Nearly all students chose the B2 question about the climate model, followed by B3 about wind power. Heating (B1) was less favoured. All questions were done well, mostly even very well. No student failed with marks below 24, and only 6 students had marks below 40, out of more than 70 taking the exam.

I always try to balance the questions with essay-like questions and mathematical questions, to take into account the different academic or mathematical background (physics/non-physics students). The good result of this exam reflects this.
